PALASIET HAIR LOSS MEDICINE

Palasiet Thalasso Clinic offers you the latest hair loss solutions as well as information on its causes and how to reduce it or prevent it. Stopping hair loss is not easy and so, when hair loss becomes too significant, specialists recommend prevention and measures as soon as possible.

In general, prior to any treatment, it is important to determine the patient's basal metabolic status. To that end, a basic blood test is performed which helps determine hair condition and subsequently prescribe a diet rich in vitamins and minerals that are necessary for hair to form.

The Hair Loss consultation is 50 €, to be subtracted from the final price of the treatments completed.

TOPICAL TREATMENTS

An active principle is applied directly. They are generally long treatments that require the patient to persevere, treatment adherence being very important.

ORAL TREATMENT

Medicines, master formulas, or vitamins are medically prescribed. They are quite safe and they have proven effects.

MESOTHERAPY FOR HAIR LOSS

This biostimulation treatment is conducted by applying small subcutaneous injections into the scalp in order to activate and improve follicular units and to enhance hair thickness, quantity, and growth.

PLATELET-RICH PLASMA (PRP)

This treatment uses the patient's concentrated platelets, obtained from a blood sample. It is very effective and safe, and it poses no risks.

HAIR TRANSPLANT

Generally used to treat baldness following a medical study and considering patient expectations. The procedure is performed by a specialised team, under local anaesthesia.

Aesthetic and hair loss medicine

TREATMENTS

PALASIET AESTHETIC MEDICINE

Palasiet Thalasso Clinic offers Aesthetic Medicine treatments. Aesthetic Medicine seeks to restore, maintain, and promote aesthetics, beauty, and health by means of minimally invasive medical intervention.

The Aesthetic Medicine consultation is free-of-charge.

REVITALISATION

Multivitamin mix. Nappage mesotherapy. The result is a smoother, more luminous skin, with a firmer texture and vitality.

BIOREGENERATION

Hyaluronic acid and amino-acids. Deep hydration, cell metabolism acceleration with an elastic, skin-suspending effect.

SKIN REHYDRATION (SKIN BOOSTER)

Hyaluronic acid injected into small intradermal deposits to hydrate the face, hands, neck, and cleavage.

EXPRESSION WRINKLES

Neuromodulators reduce and eliminate wrinkles on the upper third of the face, resulting in a more relaxed, untired expression.

EYEBROW LIFT

Brow elevation with a rejuvenating effect using hyaluronic acid.

DARK CIRCLES Correction of dark circles and rejuvenation of the gaze.

CHEEK ENHANCEMENT Hyaluronic acid remodelling for the middle third of the face.

NASOLABIAL FOLDS Nasolabial fold improvement with hyaluronic acid.

MARIONETTE LINES Hyaluronic acid improvement of the lines formed at the corner of the lip that run down to the jaw.

NON-SURGICAL FACELIFT

Reduction of wrinkles and folds, bringing firmness and volume. Projection and tension of the face using different techniques and materials.

LIPS

Hydration, shaping, projection, and augmentation with hyaluronic acid.

BARCODE AND PERIBUCAL WRINKLES

Peribucal wrinkle rejuvenation.

CHIN

Augmentation with correction and improvement of the profile.

EARLOBES

Rejuvenation with hyaluronic acid.

SCARS AND ACNE MARKS

Reduction and improvement of marks with low-density hyaluronic acid injections.

SAGGING SKIN ON THE NECK

Improvement of neck skin laxity, providing hydration and firmness.

CLEAVAGE TREATMENT Improvement of cleavage wrinkles and skin appearance.

ARMS FIRMING Improvement of saggy arms.

HAND REJUVENATION Rejuvenation of the back of the hands, which lose fat with age.

MESOTHERAPY Intradermal microinfiltration of moisturising products and vitamins.

HYPERHIDROSIS Treatment of excessive sweating using botulinum toxin.

ELIMINATION OF SKIN LESIONS Warts, ruby points, fibromas, lentigines, keratosis, etc.
